

Class 14: Mini-Project

Linh Tran PID:A16435846

Here we run through a complete RNAseq analysis from counts to pathways and biological insight...

Data import

```
library(DESeq2)
```

Loading required package: S4Vectors

Setup for DESeq

```
library(DESeq2)

dds <- DESeqDataSetFromMatrix(countData=countData,
                              colData=colData,
                              design=~condition)
```

Warning in DESeqDataSet(se, design = design, ignoreRank): some variables in design formula are characters, converting to factors

Running DESeq

```
dds <- DESeq(dds)
```

estimating size factors

estimating dispersions

gene-wise dispersion estimates

mean-dispersion relationship

final dispersion estimates

fitting model and testing

```
res <- results(dds)
```

Save results to date

```
res <- results(dds, contrast=c("condition", "hoxa1_kd", "control_sirna"))
```

```
write.csv(res, file="myresults.csv")
```

Add gene annotation data (gene names etc.)

```
summary("myresults.csv")
```

Length	Class	Mode
1	character	character

Results visualization

```
library("AnnotationDbi")  
library("org.Hs.eg.db")
```

```

Reactome

We can use reactome as an R package or we can use the online version, which has some new interactive visualization features. Let's try the web version

It wants us to upload a file with the genes of interest (ie. those with significant differences for our experiment)

```
sig_genes <- res[res$padj <= 0.05 & !is.na(res$padj), "symbol"]
print(paste("Total number of significant genes:", length(sig_genes)))
```

```
[1] "Total number of significant genes: 8147"
```

```
write.table(sig_genes, file="significant_genes.txt", row.names=FALSE, col.names=FALSE, quote=
```
